SUBJECT INDEX

Acoustic imaging, real-time signal processing in underwater, 38
Acoustic wave chirp transform techniques for analog signal processing, surface, 164
Acousto-optic implementation of real- and near-real-time signal processing, 181
Algorithms, "C" noise in recursive, 115
Analog, 128-stage charge-coupled device (CCD) correlator, a fully-, 219
Analog signal processing, surface acoustic wave chirp transform techniques for, 164
Analog signal processors in radar and communications systems, performance requirements for, 174
Aperture radar data processing for space applications, real-time synthetic, 14
Applications, real-time synthetic aperture radar data processing for space, 14
Architectures, signal processing with bit-serial word-parallel, 98
Architectures using convolutional technology, signal processing, 66

Bit-serial word-parallel architectures, signal processing with, 98

(CCD), coping with charge transfer inefficiency affecting modulation transfer function (MTF) of charge-coupled device, 230
(CCD) correlator, a fully-analog, 128-stage charge-coupled device, 219
*(CCD) memories for signal-processing applications, digital charge-*coupled device, 120
CMOS/SOS microsignal processor, 150
"C" noise in recursive algorithms, 115
Challenge to an economic issue, real-time data management of *space information systems: a, 8*
Charge-coupled device (CCD), coping with charge transfer inefficiency affecting modulation transfer function (MTF) of, 230
Charge coupled device (CCD) correlator, a fully-analog, 128-stage, 219
*Charge-coupled device (CCD) memories for signal-processing appli*cations, digital, 120
Charge transfer inefficiency affecting modulation transfer function (MTF) of charge-coupled device (CCD), coping with, 230
Chirp transform techniques for analog signal processing, surface acoustic wave, 164
Circuit for digital optical processing, development of an optical *parallel logic device and a half-adder,* 156
Coherent optical implementation of generalized two-dimensional transforms, 210
Communications systems, performance requirements for analog signal processors in radar and, 174
Computing—a philosophy for implementations, real time floating point, 105
Control, real-time signal processing devices for missile guidance and, 22
Convolutional technology, signal processing architectures using, 66
Coping with charge transfer inefficiency affecting modulation transfer function (MTF) of charge-coupled device (CCD), 230
Correlator, a fully-analog, 128-stage charge-coupled device (CCD), 219

Data management of space information systems: a challenge to an economic issue, real-time, 8
Data processing for space applications, real-time synthetic aperture radar, 14
Dense non-binary arithmetic with I²L multi-valued logic, 110
Design for a real-time signal processor, a proposed, 91
Development of an optical parallel logic device and a half-adder circuit for digital optical processing, 156
Devices for missile guidance and control, real-time signal processing, 22
Digital charge-coupled device (CCD) memories for signal-processing applications, 120
Digital optical processing, development of an optical parallel logic device and a half-adder circuit for, 156
Digital signal processing systems, implementation of real-time, 81

Economic issue, real-time data management of space information systems: a challenge to an, 8
Encoding for real-time image transmission, hybrid image source, 204

Floating point computing—a philosophy for implementations, real time, 105
(A) Fully-analog, 128-stage charge-coupled device (CCD) correlator, 219

Guidance and control, real-time signal processing devices for missile, 22

Half-adder circuit for digital optical processing, development of an optical parallel logic device and a, 156
High-performance parallel processors, 45
Hybrid image source encoding for real-time image transmission, 204

I²L multi-valued logic, dense non-binary arithmetic with, 110
Image source encoding for real-time image transmission, hybrid, 204
Image transmission, hybrid image source encoding for real-time, 204
Imaging, real-time signal processing in underwater acoustic, 38
Implementation of generalized two-dimensional transforms, coherent *optical, 210*
Implementation of real-time digital signal processing systems, 81
Implementation of real- and near-real-time signal processing, acousto-optic, 181
Implementations, real time floating point computing—a philosophy *for, 105*
Integrated optic signal processors, wideband, 60
Integrating optical processors, time, 196
Introduction, real time signal processing—seminar, 2

Logic, dense non-binary arithmetic with I²L multi-valued, 110
Logic device and a half-adder circuit for digital optical processing, development of an optical parallel, 156

(MTF) of charge-coupled device (CCD), coping with charge transfer *inefficiency affecting modulation transfer function, 230*
Management of space information systems: a challenge to an *economic issue, real-time data, 8*
Memories for signal-processing applications, digital charge-coupled device (CCD), 120
Microsignal processor, CMOS/SOS, 150
Missile guidance and control, real-time signal processing devices *for, 22*
Modulation transfer function (MTF) of charge-coupled device (CCD), coping with charge transfer inefficiency affecting, 230
Multimode radar processor, 141
Multi-valued logic, dense non-binary arithmetic with I²L, 110

Near-real-time signal processing, acousto-optic implementation of real- and, 181
Noise in recursive algorithms, "C", 115
Non-binary arithmetic with I²L multi-valued logic, dense, 110

128-stage charge-coupled device (CCD) correlator, a fully-analog, 219
Optic implementation of real- and near-real-time signal processing, acousto-, 181
Optic signal processors, wideband integrated, 60
Optical implementation of generalized two-dimensional transforms, coherent, 210
Optical parallel logic device and a half-adder circuit for digital optical processing, development of an, 156
Optical processing, development of an optical parallel logic device and a half-adder circuit for digital, 156
Optical processors, time integrating, 196

Parallel logic device and a half-adder circuit for digital optical processing, development of an optical, 156
Parallel processors, high-performance, 45
Performance parallel processors, high-, 45
Performance requirements for analog signal processors in radar and communications systems, 174
Philosophy for implementations, real time floating point computing—a, 105
Positioning systems, real-time processing techniques for tactical, 30
Processing, acousto-optic implementation of real- and near-real-time signal, 181
Processing architectures using convolutional technology, signal, 66
Processing with bit-serial word-parallel architectures, signal, 98
Processing, development of an optical parallel logic device and a half-adder circuit for digital optical, 156
Processing devices for missile guidance and control, real-time signal, 22
Processing for space applications, real-time synthetic aperture radar data, 14
Processing, surface acoustic wave chirp transform techniques for analog signal, 164
Processing techniques for tactical positioning systems, real-time, 30
Processing in underwater acoustic imaging, real-time signal, 38
Processor, CMOS/SOS microsignal, 150
Processor, multimode radar, 141
Processor, a proposed design for a real-time signal, 91
Processors, high-performance parallel, 45
Processors in radar and communications systems, performance requirements for analog signal, 174
Processors, time integrating optical, 196
Processors, wideband integrated optic signal, 60
(A) Proposed design for a real-time signal processor, 91

Radar and communications systems, performance requirements for analog signal processors in, 174
Radar data processing for space applications, real-time synthetic aperture, 14
Radar processor, multimode, 141
Real- and near-real-time signal processing, acousto-optic implementation of, 181
Real-time data management of space information systems: a challenge to an economic issue, 8
Real-time digital signal processing systems, implementation of, 81
Real time floating point computing—a philosophy for implementations, 105
Real-time image transmission, hybrid image source encoding for, 204
Real-time processing techniques for tactical positioning systems, 30
Real-time signal processing devices for missile guidance and control, 22
Real time signal processing—seminar introduction, 2
Real-time signal processing, SOS technology for, 127
Real-time signal processing in underwater acoustic imaging, 38
Real-time signal processor, a proposed design for a, 91
Real-time synthetic aperture radar data processing for space applications, 14
Recursive algorithms, "C" noise in, 115
Requirements for analog signal processors in radar and communications systems, performance, 174

/SOS microsignal processor, CMOS, 150
SOS technology for real-time signal processing, 127
Serial word-parallel architectures, signal processing with bit-, 98
Signal processing, SOS technology for real-time, 127
Signal processing, acousto-optic implementation of real- and near-real-time, 181
Signal-processing applications, digital charge-coupled device (CCD) memories for, 120
Signal processing architectures using convolutional technology, 66
Signal processing with bit-serial word-parallel architectures, 98
Signal processing devices for missile guidance and control, real-time, 22
Signal processing, surface acoustic wave chirp transform techniques for analog, 164
Signal processing systems, implementation of real-time digital, 81
Signal processing in underwater acoustic imaging, real-time, 38
Signal processor, a proposed design for a real-time, 91

Signal processors in radar and communications systems, performance requirements for analog, 174
Signal processors, wideband integrated optic, 60
Source encoding for real-time image transmission, hybrid image, 204
Space applications, real-time synthetic aperture radar data processing for, 14
Space information systems: a challenge to an economic issue, real-time data management of, 8
Surface acoustic wave chirp transform techniques for analog signal processing, 164
Synthetic aperture radar data processing for space applications, real-time, 14
Systems: a challenge to an economic issue, real-time data management of space information, 8
Systems, performance requirements for analog signal processors in radar and communications, 174
Systems, real-time processing techniques for tactical positioning, 30

Tactical positioning systems, real-time processing techniques for, 30
Techniques for analog signal processing, surface acoustic wave chirp transform, 164
Techniques for tactical positioning systems, real-time processing, 30
Technology, signal processing architectures using convolutional, 66
Time integrating optical processors, 196
Transfer function (MTF) of charge-coupled device (CCD), coping with charge transfer inefficiency affecting modulation, 230
Transfer inefficiency affecting modulation transfer function (MTF) of charge-coupled device (CCD), coping with charge, 230
Transform techniques for analog signal processing, surface acoustic wave chirp, 164
Transforms, coherent optical implementation of generalized two-dimensional, 210
Transmission, hybrid image source encoding for real-time image, 204
Two-dimensional transforms, coherent optical implementation of generalized, 210

Underwater acoustic imaging, real-time signal processing in, 38

Wave chirp transform techniques for analog signal processing, surface acoustic, 164
Wideband integrated optic signal processors, 60
Word-parallel architectures, signal processing with bit-serial, 98
